## PROFESSIONAL SUMMARY

Results-driven Senior DevOps & Cloud Engineer with **8+ years** designing and operating enterprise-scale cloud-native platforms on **Azure, Kubernetes, and Terraform**. Proven track record of leading zero-downtime production go-lives, reducing deployment lead times via multi-stage CI/CD automation, and cutting cloud costs through intelligent resource optimisation. Deep expertise across **AKS, Datadog, Ansible, Databricks, and Akamai**.

## CORE COMPETENCIES

**Cloud & Infrastructure:** Microsoft Azure

**Security & Edge:** Akamai, SCIM, SonarQube, DevSecOps, Checkov, Prowler, TFsec

**Observability:** Datadog APM, Azure Monitor, Grafana, Prometheus, Loki

**Containers & Orchestration:** Kubernetes, Docker, Helm, ArgoCD

**IaC & Automation:** Terraform, Ansible, Bash, Python

**DataOps:** Databricks, Unity Catalog, SQL, Azure data factory, Functions apps

**CI/CD:** Azure DevOps, Artifactory, SonarQube, Git, GitHub Actions

**Collaboration:** Jira, Confluence, ServiceNow, Agile / Scrum, Slack

## PROFESSIONAL EXPERIENCE

**Senior DevOps Consultant** | **Xebia** | *Project - Imperial*

*Gurugram, India · Jun 2024 – Present*

- Delivered **zero-downtime production launch** of a new brand by orchestrating end-to-end infra provisioning, AKS deployment, helm chart authoring and Akamai CDN configuration — reducing go-live risk to zero across **3 environments**.
- Accelerated deployment frequency by **40%** by redesigning CI/CD pipelines with multi-stage parallel execution on Azure DevOps, cutting average release cycle time from **5 hours to under 2 hours**.
- Reduced cloud infrastructure and datadog spend by **~25%** by right-sizing AKS resources and limits across **10+ microservices** using Datadog APM usage-trend analysis.
- Automated user access governance for **200+ Databricks users** across **50 workspaces** by implementing SCIM provisioning and Unity Catalog data policies, eliminating all manual access-management overhead.
- Provisioned **100%** of Azure infrastructure via reusable Terraform modules — replacing ad-hoc manual builds and cutting environment setup time from **3 days to under 2 hours** for all environments.
- Elevated Azure **Secure Score** across multiple subscriptions by triaging and remediating **Defender for Cloud** recommendations — prioritising critical severity findings to strengthen infrastructure security posture across production environments.
- Configured **Akamai Property Manager and Cloudlets** for traffic routing, edge caching, and security policy enforcement.
- Designed an automated Azure infrastructure security auditing system (Checkov · tfsec · Prowler) with **Azure OpenAI Service**-powered remediation guidance and ARM blast-radius analysis — delivering per-resource-group Terraform fix snippets and stakeholder sign-off workflows as **Azure DevOps Work Items**.
- Built an **Azure cost anomaly detection engine** using Azure Cost Management API with rolling 7-day statistical baseline and **Azure OpenAI Service** right-sizing recommendations — surfacing orphaned resources and oversized workloads via automated weekly audit reports published as Azure DevOps Work Items.

**DevOps Consultant** | **Capgemini** | *Project - HP*

*Noida, India · Jul 2022 – Jun 2024*

- Engineered end-to-end CI/CD pipelines for **Azure data & application services** (ADF · Synapse · Databricks · App Service · Function App · Logic App · Azure SQL) — reducing deployment time by 80% and eliminating manual release gates across delivery squads.
- Architected **multi-stage build** pipelines for Java/Tomcat and .NET applications on Azure VMs integrating SonarQube, Nexus, Veracode, and unit testing gates with automated health checks and scan-report notifications, improving release quality and reducing post-deployment defects.
- Automated Azure infrastructure provisioning using **Terraform modules and ARM Templates** — standardising onboarding and environment setup for data infrastructure across teams and cutting new-environment setup time from 3 days to under 2 hours.
- Implemented REST API and Python/PowerShell automation to **enforce deployment governance** and operational consistency across the organisation — eliminating ~8 hours/week of manual release overhead per engineer.

**DevOps Engineer** | **Tata Consultancy Services (TCS)** | *Project - AP Moller*

*Noida, India · Mar 2018 – Jul 2022*

- Built **Datadog APM monitoring** from the ground up across a distributed platform of 30+ services, achieving full observability within 12 weeks — Instrumented Datadog APM across a high-traffic e-commerce platform — building custom dashboards, configuring alert thresholds, and integrating bi-directional ServiceNow incident management, improving on-call response time by 40%.
- Reduced server configuration and provisioning effort by 70% by **authoring Ansible playbooks** and Bash scripts managing 30+ Linux hosts across production and non-production environments — eliminating configuration drift entirely.
- Constructed custom BI Database Views and Data Models for SoD (Segregation of Duties) reporting — reducing compliance reporting effort by 70% and enabling audit-ready access visibility.
- Standardised CI/CD using Jenkins, Maven, and Git — cutting average release cycle from 2 weeks to 3 days and reducing build failures by 30%.
- Optimised application performance across distributed systems (Apache · Load Balancer · Linux · Dispatcher · Database) through capacity planning and infrastructure tuning — improving scalability and reliability based on Datadog trend analysis.
- Developed an automated SOAP/REST API workflow layer integrating 6 operational systems — removing ~8 hours/week of manual intervention per engineer.
- Crafted Shell + SQL pipelines for automated periodic data extraction from databases to Apache server — saving ~5 hours/week of manual analyst effort.
